Application/Control Number: 10/719,677

Art Unit: 3652

Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-21 and 32-35, drawn to a loader assembly and method to mount the assembly, classified in class 414, subclass 686 and/or 800.
- II. Claims 22-31, drawn to a cylinder, classified in class 92, subclass 169.1.

It is noted that claims 23, 24 and 25 should depend from claim 22 instead of claim 15. This appears to be a typographical error.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination in invention I can use a cylinder other than that in invention II. The subcombination has separate utility such as lifting any arm.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Application/Control Number: 10/719,677

Art Unit: 3652
